HortiMaX
growing solutions

The new standard in adaptive greenhouse technology

Are you installer or greenhouse builder in the horticultural sector and looking for an affordable, flexible, expandable and user-friendly process computer? And should that system be adaptable to the local needs of growers and climate conditions? If so, the HortiMaX CX500 is the best solution for you and your customers. It optimises the greenhouse climate, but also controls irrigation, and energy systems. This horticulture process computer is suitable for every greenhouse or crop and can grow as grower's business expands. In short, the HortiMaX CX500 is a must and a pleasure to have for every installer or dealer.

Distinctive
The HortiMaX CX500 is distinctive in horticulture. Moreover, it is developed to accommodate the installer which resulted in:

Horti-MaXimum ease of configuration

Horti-MaXimum ease of installation

Horti-MaXimum ease of use

Horti-MaXimum affordability

Horti-MaXimum remote controllable

Horti-MaXimum scalability

Horti-MaXimum flexibility

Horti-MaXimum reliability

Adaptive greenhouse technology
The HortiMaX CX500 has been equipped with a comprehensive range of technologies. Every installer, dealer or greenhouse builder determines which functionality his customer requires, depending on his needs, crop and climate conditions. This means that a grower only sees and pays the functionality he uses. And if he needs more functionality later, the HortiMaX CX500 grows with him. Just add technology as the growers business grows. This also means a great advantage for you: you can always offer the best fit.

HortiMaX CX500 software
Using the HortiMaX CX Assistant software, you can design your own system by simply 'drag and drop' the controls you need. The configuration process is easy and minimises errors, which keeps installation costs low and results in fewer questions afterwards. Just adopt the technology you need and expand as the growers business grows. The HortiMaX CX user interface can be fully customised to the user. Any feature you don't use is hidden. The user-friendly HortiMaX CX user interface enables you to display and analyse every stage of your crop's development.

More information?
Do you need a top-brand affordable process computer that will grow with your customer? If so, the HortiMaX CX500 is the solution. Please, feel free to contact us for more information or a demonstration.
