growing solutions

The new standard in adaptive greenhouse technology

Are you a grower and looking for an affordable, flexible, expandable and user-friendly greenhouse control system? And should that system be adaptable to your local needs and climate conditions? If so, the HortiMaX CX500 is the best solution for you. It took us more than fifty years of experience to develop this new standard. It not only optimises the greenhouse climate, but also controls irrigation, heat buffers or boilers. The HortiMaX CX500 is suitable for every grower, every crop, all over the world and can grow as your business expands. In short, the HortiMaX CX500 is a must have and a pleasure for every grower.

HortiMaXimum flexibility

As a grower, you determine which functionality you require, depending on your needs, crop and climate conditions. This means that you'll only pay for what you're going to use. And if you need more functionality later, you don't need a new one. The HortiMaX CX500 will grow as your business grows. Together with your installer, just adapt the system by simply 'dragging and dropping' the options you additionally want.

HortiMaXimum scalability

The HortiMaX CX500 is the first system to use our CX hardware. These compact I/O modules are a breeze to install anywhere. Components are easy to install in new or existing cabinets. Again it keeps installation costs low.

HortiMaXimum affordability

Our main aim in designing the HortiMaX CX500 was to make it as affordable as possible. This means that you only pay for the functionality you use, installation is easy and cost effective, and the CX user interface is included free of charge. What's more, you'll own a top-brand system that is easy to upgrade as your business grows.

HortiMaXimum reliability

A reliable solution starts with a configuration that fully meets your needs. Well begun is half done as they say. That's exactly what the HortiMaX CX500 offers. The easy installation, modern CX user interface and new hardware have resulted in an advanced and dependable greenhouse control system.

HortiMaXimum ease of installation

The installation is fast, which keeps installation costs low and results in fewer questions afterwards. Thanks to the use of local control boxes, installation has never been this easy.

HortiMaXimum ease of use

The HortiMaX CX500 can be customised to every grower. Any feature you don't use is hidden. As a result, simple configurations contain little complexity. The user-friendly interface enables you to display and analyse every stage of your crop's development.

HortiMaXimum ease of operation

The HortiMaX CX500 is operated remotely; a simple PC is all you need. The system lets you check on your growing environment, even while you're away from your business (e.g. on holiday). This feature is also used to offer you remote support as well.

HortiMaXimum ease of maintenance

If you have an internet connection, you can download and install the latest software updates with our user-friendly update system. The HortiMaX CX500 contains advanced hardware and a minimum number of technical components, making it very easy to maintain.
